Transaction Status

Alternative to listening to events by using a webhook URL, you can request/call for the transaction status. This requires making a `GET` request at regular intervals to get the final status of a request.

> BaseUrls

GET - `{{baseurl}}/transaction/status/:reference`

Authorization	Set value to Bearer SECRET_KEY
Content-type	Set value to `application/json`

Sample payload for transfer | Sample Payloa... | Sample Payloa...

```
{
    "success": true,
