STARTBUTTON API DOC > REFUNDS

Copy ⌄

Refund Transaction Status (TSQ)

Using a single API, you can request/call for the transaction status of an initiated Refund.

Authorization	Set value to `Bearer SECRET_KEY
Content-type	Set value to `application/json`

> BaseUrls

GET: `{{baseurl}}/transaction/refunds/:query/status`

ⓘ The secret key can be gotten from the 'Settings' page on your Startbutton dashboard.
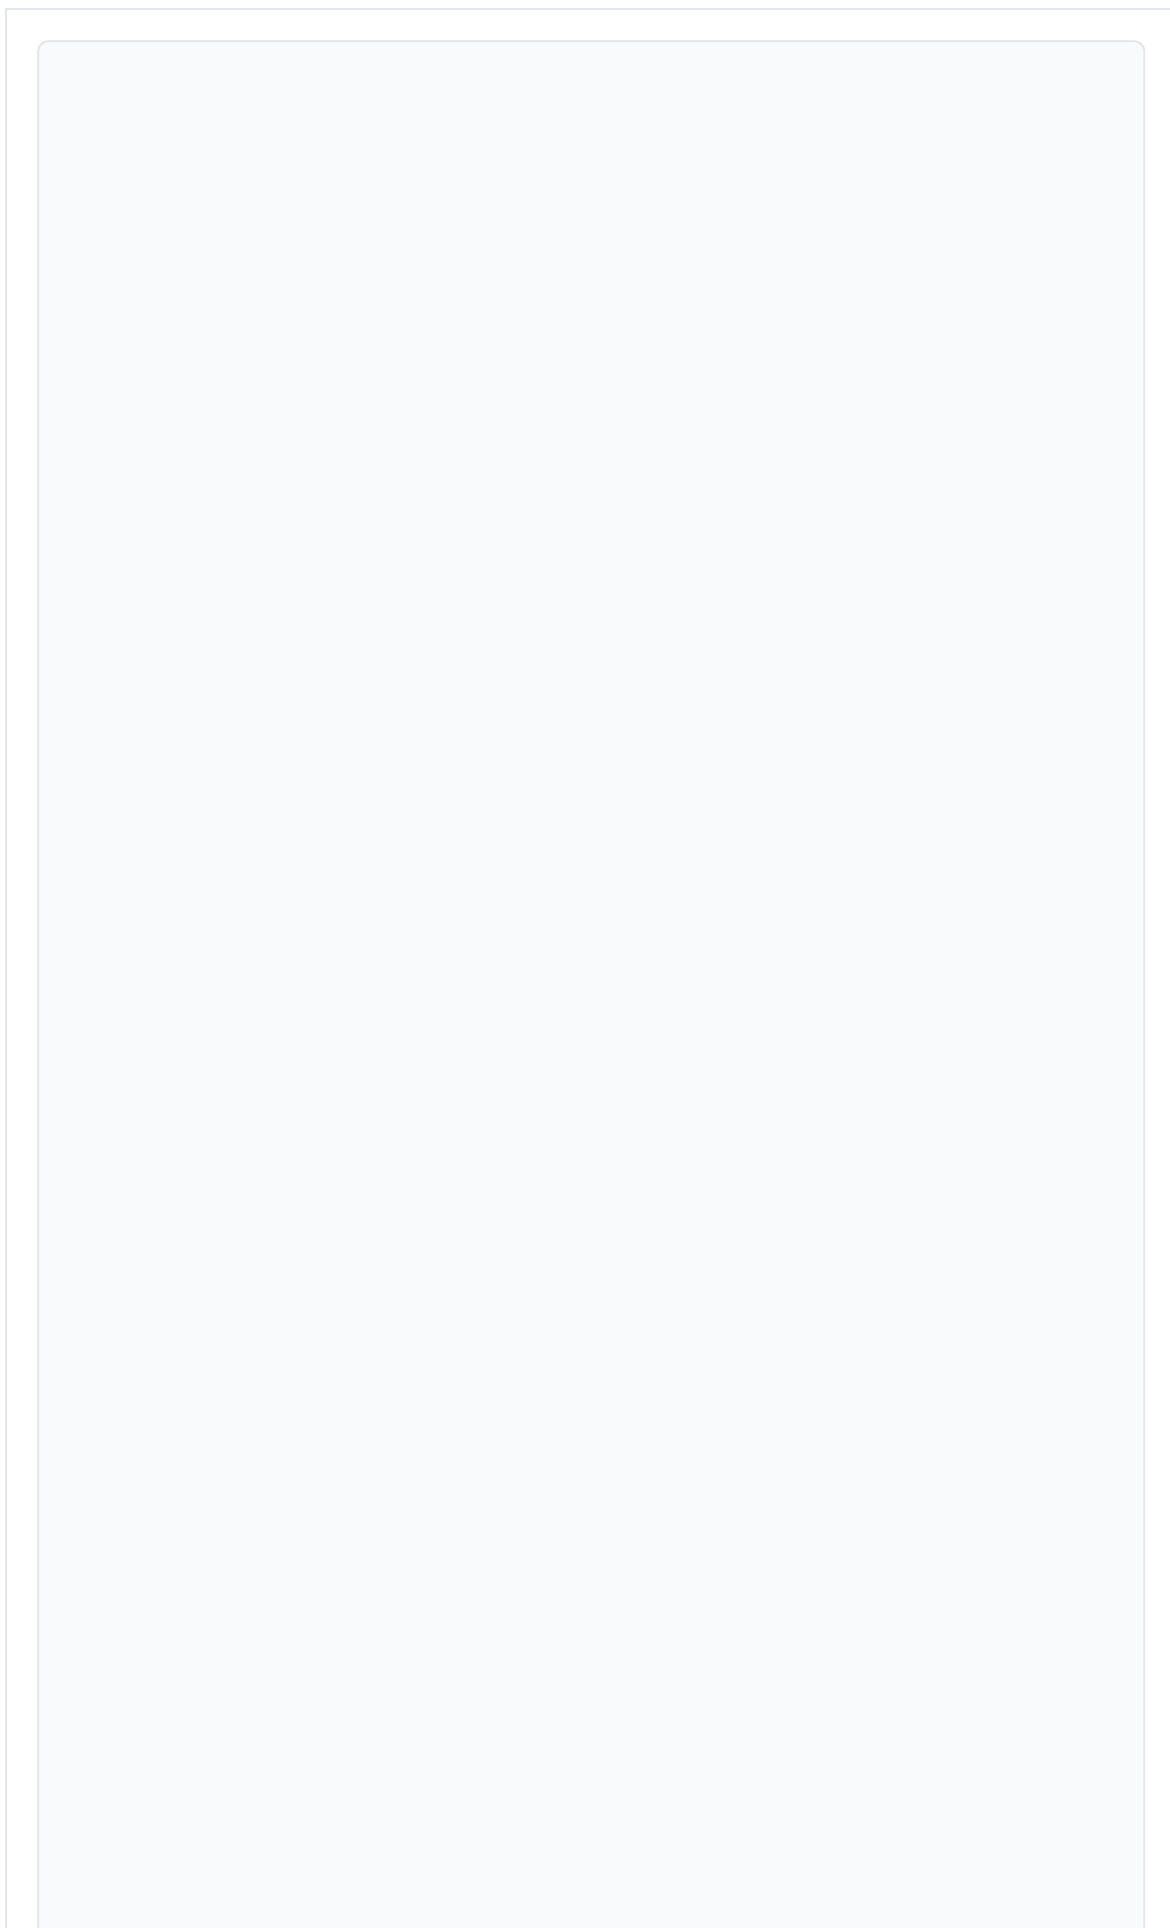

Query key	Required?	Description
transactionReference	Yes	This can be either: 1. the `refund transaction` reference. This reference provides the details and status of the refund processed. 2. the `original transaction` reference. This reference provides a list of all refunds associated with the transaction (in cases of multiple partial refunds).

> ⓘ The `refund transaction` reference can be obtained from the email you receive after a Refund is processed or from the Refunds tab on the Dashboard, while the `original transaction` reference can be obtained from the Dashboard or webhook notification.

Sample response:

Success | Incorrect transaction reference

```json
